EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Craig Largent on September 12, 2005.

Claim 1, line 7, and claim 13, lines 7 and 9, have been amended by inserting the word "then" in such a manner that the temporal relationship between process steps that was present in originally filed claims 5 and 15 has been reestablished. The application has been amended as follows:

1. (Currently Amended) A method of fabricating a spatial light modulator, comprising:
 - generating a mask on a first side of a first substrate;
 - forming cavities in the first side of the first substrate;
 - fabricating electrodes and addressing and control circuitry on a first side of a second substrate;
 - then bonding the first side of the first substrate to the first side of the second substrate; and
 - forming hinges, connectors, and mirror plates on a second side of the first substrate after bonding the first side of the first substrate to the first side of the second substrate.

13. (Currently Amended) A method of fabricating a spatial light modulator including an array of a plurality of mirrors, comprising:

- generating a first mask on a first side of a first substrate, the first mask defining areas to be etched from the first side of the first substrate;
- etching the areas on the first side of the first substrate defined by the first mask to form a plurality of cavities in the first side of the first substrate;
- fabricating control circuitry and then electrodes ~~and control circuitry~~ on a first side of a second substrate;
- then bonding the first side of the first substrate to the first side of the second substrate;
- creating a reflective surface on the second side of the first substrate;
- generating a second mask defining areas to be etched from the second side of the first substrate; and
- etching the areas on the second side of the first substrate defined by the second mask to form a plurality of hinges and mirror plates.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Allan Olsen whose telephone number is 571-272-1441. The examiner can normally be reached on M-F 1-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Parviz Hassanzadeh can be reached on 571-272-1435. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
